

AI, Big Data & IoT Application in supply chain

STEVEN LOH

Lenovo Malaysia – COUNTRY SALES MANAGER (COMMERCIAL)
Malaysia IoT Association – Deputy Chairman

13 Nov 2018

BUSINESS ANALYTICS MACHINE LEARNING

Artificial intelligence (AI) is any form of intelligence shown by a machine, which resembles natural (human) intelligence such as planning, learning, **problem solving**, etc. Machine learning (ML) is the subset of AI. The ability of machines to **predict outcomes** without being explicitly programmed to do so.

Data is the foundation of every **modern marketing plan**. What distinguishes some marketing approaches from others is the way that data is collected, how it's leveraged and how effectively it can drive desired outcomes.

ARTIFICIAL INTELLIGENCE

Early artificial intelligence stirs excitement.

MACHINE LEARNING

Machine learning begins to flourish.

DEEP LEARNING

Deep learning breakthroughs drive AI boom.

1950's

1960's

1970's

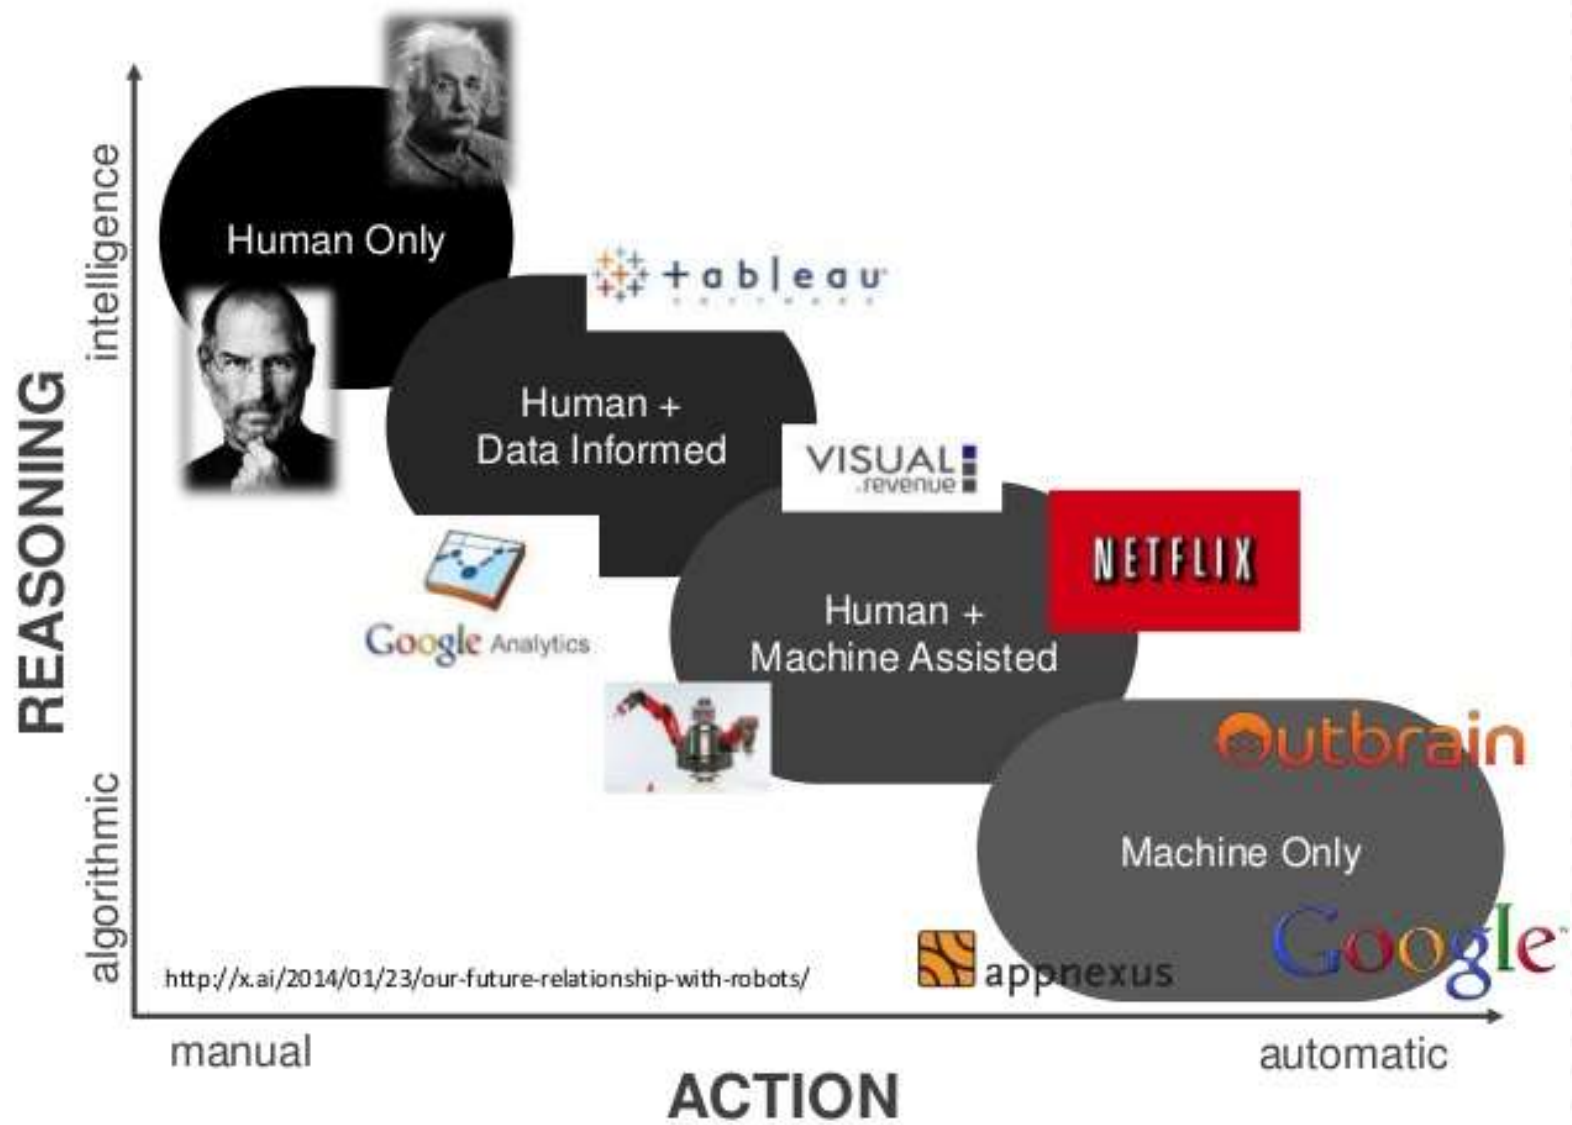

1980's

1990's

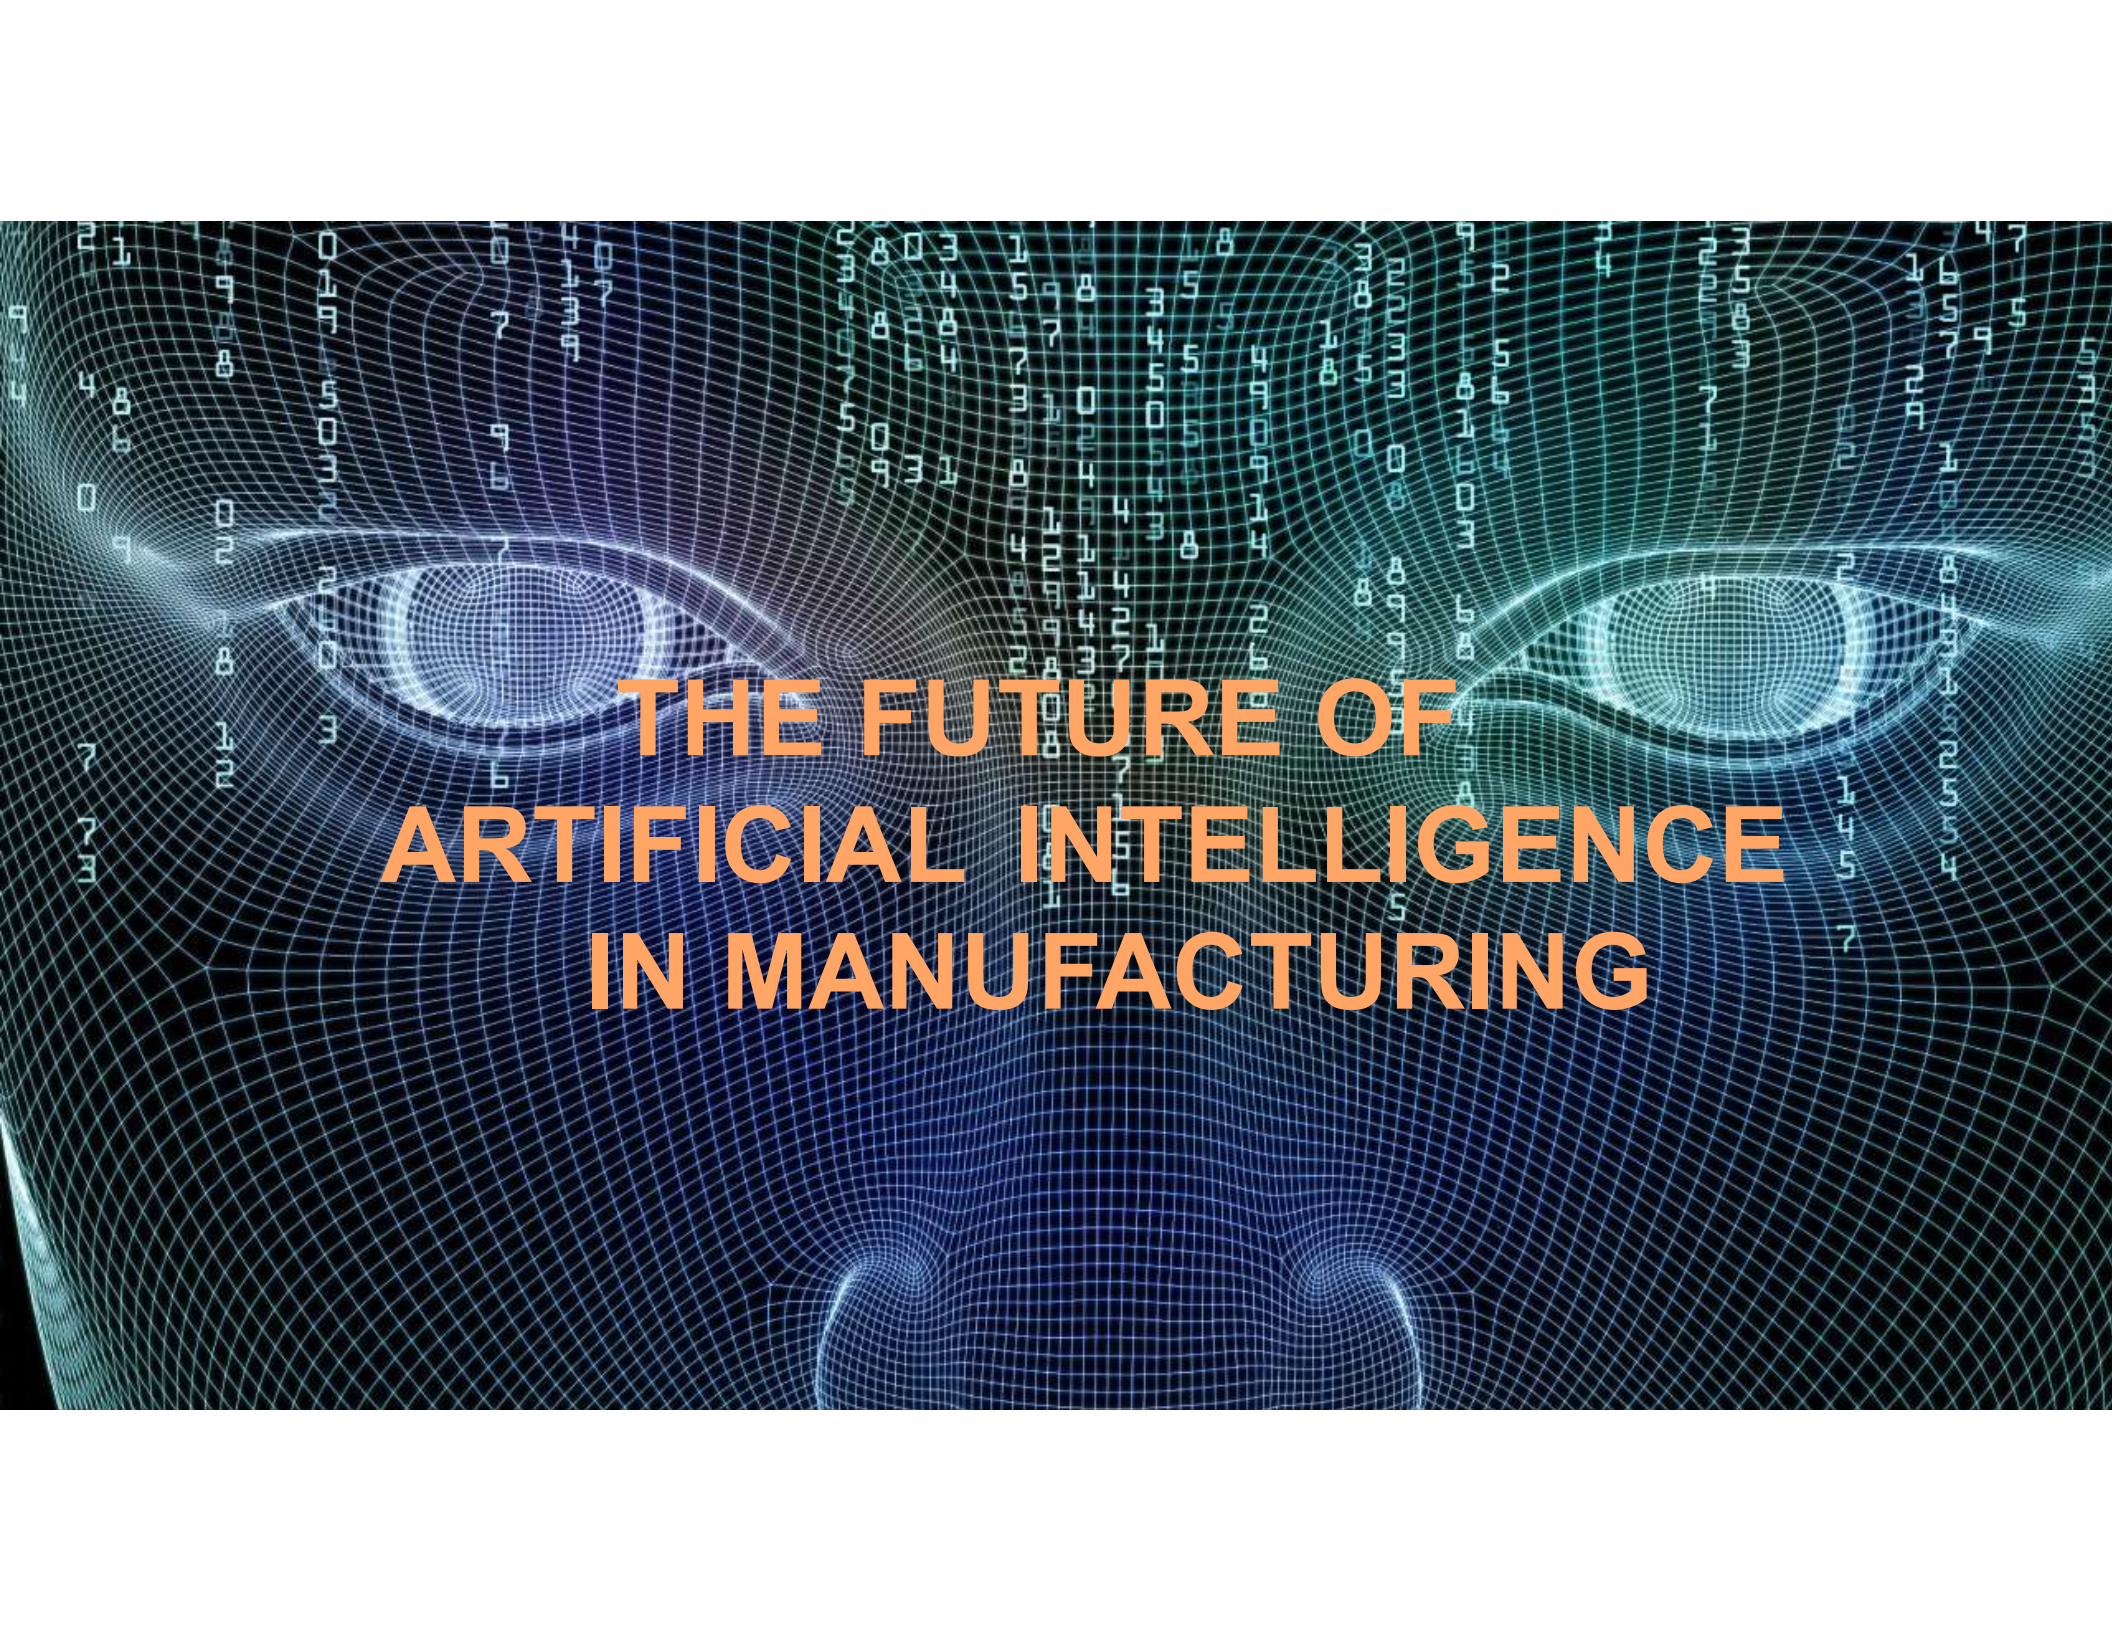

2000's

2010's

Since an early flush of optimism in the 1950s, smaller subsets of artificial intelligence – first machine learning, then deep learning, a subset of machine learning – have created ever larger disruptions.

THE FUTURE OF ARTIFICIAL INTELLIGENCE IN MANUFACTURING

ARTIFICIAL INTELLIGENCE IN MANUFACTURING – HIGH QUALITY, NEW BUSINESS PROCESS

MANUFACTURING SAFETY

AI CREATES NEW SUPPLY CHAIN MANUFACTURING

FinTech Technology

- Supply Chain Financing
- Optimizing Working capital
- Optimum use of assets

Analytics and Big Data

- Big Answers are important from the Big Data
- Buying Pattern
- Inventory check and fulfillment

Internet of Things

- To Exploit 4 models Manage, Monetize, Operate and Extend beyond IoT
- Organizations to focus on their top assets or processes

Smart Machines

- Era of Artificial intelligence evolving "Machine Helpers"
- Autonomous vehicles, advanced robots, virtual personal assistants and smart advisors

3D Printing

- Also called "Additive manufacturing". Making 3D objects from digital file.
- Shipment expected to grow 98% in future being helpful in cost-effective & short-run manufacturing.

BlockChain

- Use of Bitcoin in payments
- Each Node contains all details related to ledger which lets tracking easy

Cloud/Client Computing

- Evaluation of "second-screen phenomenon"
- Mobile and tablet based solutions let vendors check status of material from anywhere

CHINA INVESTMENT IN A.I

- China's 2030 plan envisions building a \$1 trillion A.I. industry
- Investors poured \$4.5 billion into more than 200 Chinese A.I. companies between 2012 and 2017
- The biggest A.I. venture deal ever was completed last month when Alibaba led a \$600 million deal for China-based facial-recognition start-up SenseTime
